ERASE

the undesired

SIGNS OF AGE

hiding the true self?

Define is the **Quanta Skin App** dedicated to help your face appear more tonic with no wrinkles. As years go by, the skin starts producing less collagen becoming thinner, drier, and less elastic. The loss of collagen leads to wrinkle formation and sagging.

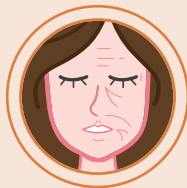

To make the **hands of the clock turn back** is necessary to act on this damaged collagen and the laser light represents the gold standard **non invasive** mean to promote the **natural skin restoration**.

To whom is it **RECOMMENDED?**

This treatment is focused on evident and significant **signs of facial ageing** especially fine lines and wrinkles. **Define** takes advantage of laser skin resurfacing to remodel the old collagen fibers into **their younger configuration**.

The use of laser light makes Define a non-invasive treatment resulting to be safer than surgical or injectables invasive solutions.

After few sessions the skin will become **more toned**, eventual fine lines and **wrinkles** will progressively **disappear** and it will be possible to notice an improvement of the appearance of **facial skin texture and firmness**. The final results will be observable a few months after the last session.

**SKIN
RESURFACING**

AGE ERASER.

How does IT WORK?

No sun or tanning lamps for two months prior to the treatment

1 to 4 treatments, depending on skin status

From 20 to 45 minutes
